Volume LXXVI Number 3

## **WOMEN IN SCIENCE**

## How much have times changed?

The history of women in science is full of stories of men taking credit for women's work. We will be showcasing two examples of this, the story of Jocelyn Bell Burnell, the woman who discovered pulsars in 1967, and Rosalind Franklin, whose research in 1953 was instrumental to figuring out the structure of DNA. Men who built upon the work of these amazing women received Nobel

Prizes for their work, while the women were barely acknowledged.

Are these isolated incidents? Is this still going on today? After watching informative videos about these two remarkable women, we will have a discussion on whether and how much things have changed in today's society.

We hope you will join us to find out more about this timely and important topic.

Saturday, November 20, 2021,

1:00 PM <------Zoom meeting

Read page 6 column 1 for how to attend!

No reservations required. Cost is free. We encourage you to invite your friends to join us. See directions on page 6 on how to attend using your computer or tablet, or how to call in using **any phone**.

AAUW advances equity for women and girls through advocacy, education, philanthropy and research.

In principle and in practice, AAUW values and seeks a diverse membership.

There shall be no barriers to full participation in this organization on the basis of gender, race, creed, age, sexual orientation, national origin, disability or class
